概歴

- Born in Kagawa, March 19 1955 1955年3月19日
- Marugame High School (1970.4-1973.3)
- Kyoto University (Aerodynamics, Bachelor and Master) (1973.4-1979.3)
- PhD, The university of Tokyo, 1999.3: Precise measurement of the Normalized radar cross section of the earth surface using the spaceborne synthetic aperture radar)
- JAXA (1979.4.1-2015.3.31) (36 years)
 - Tsukuba Space center (1979.4-1985.8) (6 years年)
 - Earth Observation Center (1985.8-1995.3) (10 years年)
 - Jet Propulsion Laboratory (1990.1-1991.1)
 - Earth Observation Research Center (1995.4-2015.3) (20 years)
 - Roppongi (1995.4-2001.7)
 - Harumi (2001.8-2006.10)
 - Tsukuba (2006.11-2015.3)
- Professor, Tokyo Denki University, School of science and engineering, division of architectural, civil and environmental engineering (2015.4.1-)
- Major: Microwave remote sensing, SAR, Scatterometer

- **Contents**
- PART I (13:00-15:00)
 1. Introduction: What is the earth?
 2. What is the remote sensing? (Principles)
 3. How to capture the rotating earth?
 4. Satellite Operation
 5. Satellite system
 6. SAR system
 7. ALOS-2
- PART II (15:00-17:00)
 8. SAR quick training.

1. Introduction : What is the earth?

- 4,600,000,000 years from the birth.
- Ellipsoid with $R_a=6377$. and $R_b=6356$ km
- Land as the 30% of the surface and 70% as the ocean
- Four spheres for the dynamic earth surface, geosphere (solid earth), biosphere, cryosphere, hydrosphere.
- Daily Rotation angle of $360+360/365.25$
- 7,00,000,000 human beings on the earth (2011.10.31).

Masanobu Shimada

6

Mission definition for the problem solver

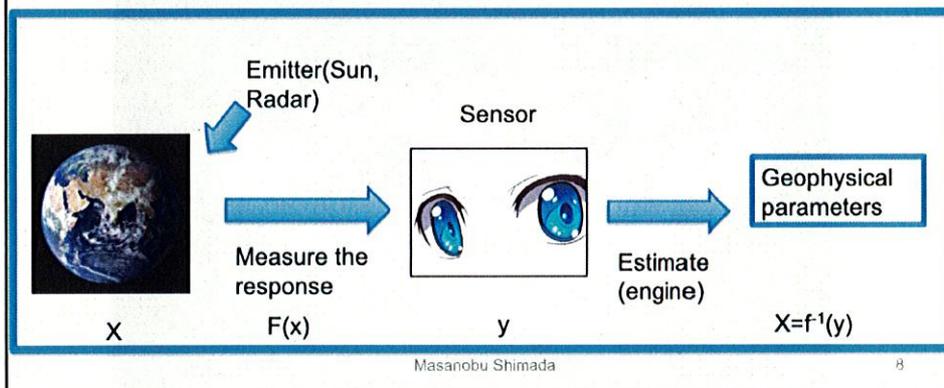

- Define the problems
- Capture the images (data) of the earth (land, ocean, and atmosphere)
- Investigate the images (data) and consolidate to interpret the images for geophysical parameter estimation

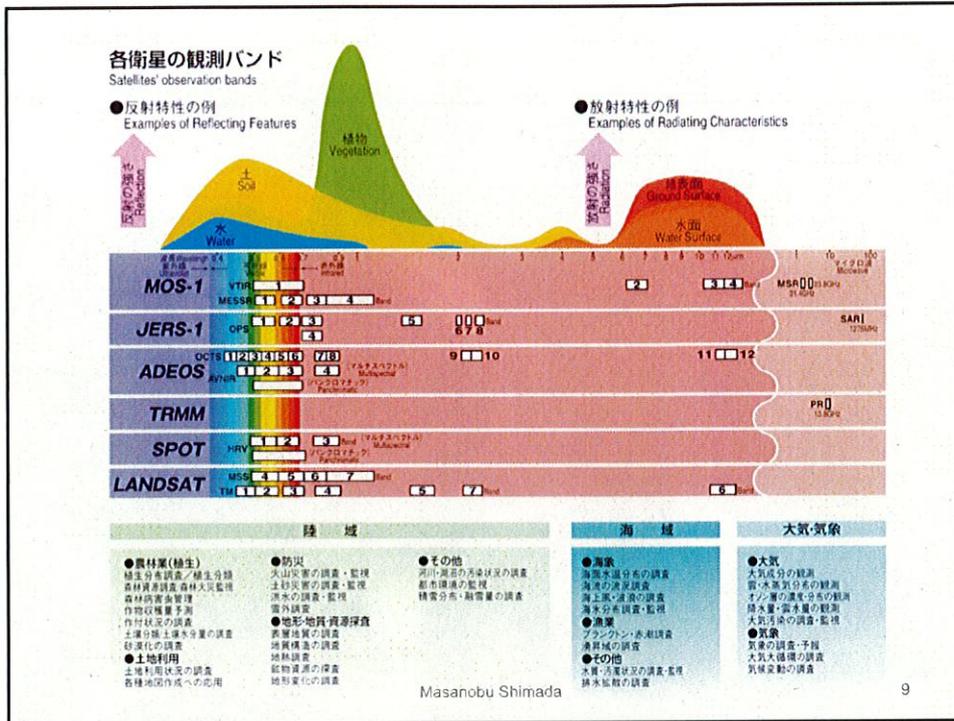

Masanobu Shimada

7

2. What is the remote sensing?

- To obtain (guess) the (geo) physical information of the target from a distance
- by means of the optical or microwave radiations

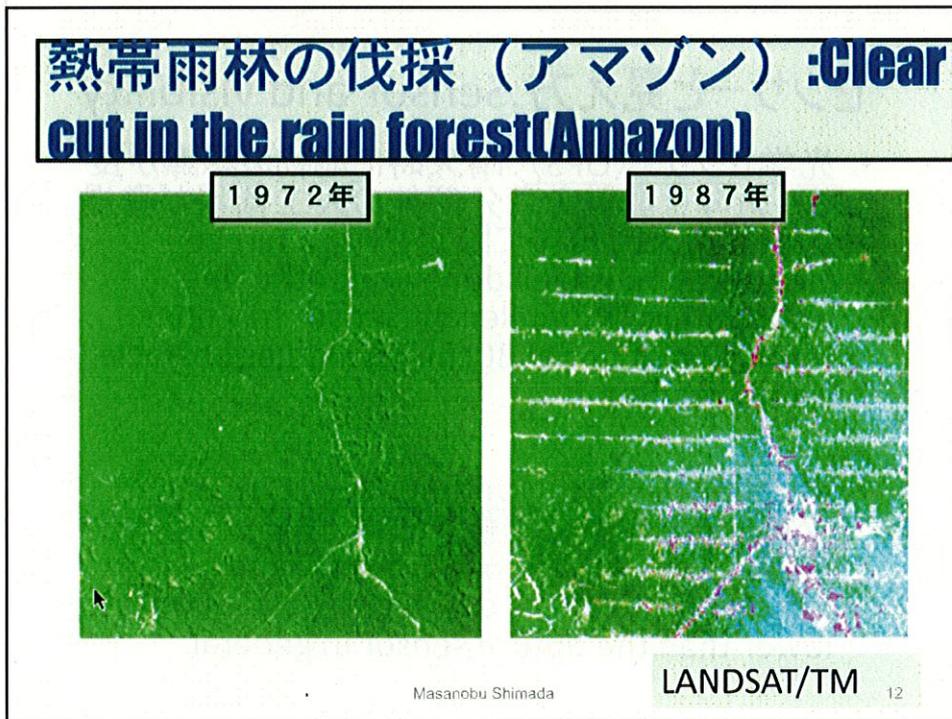

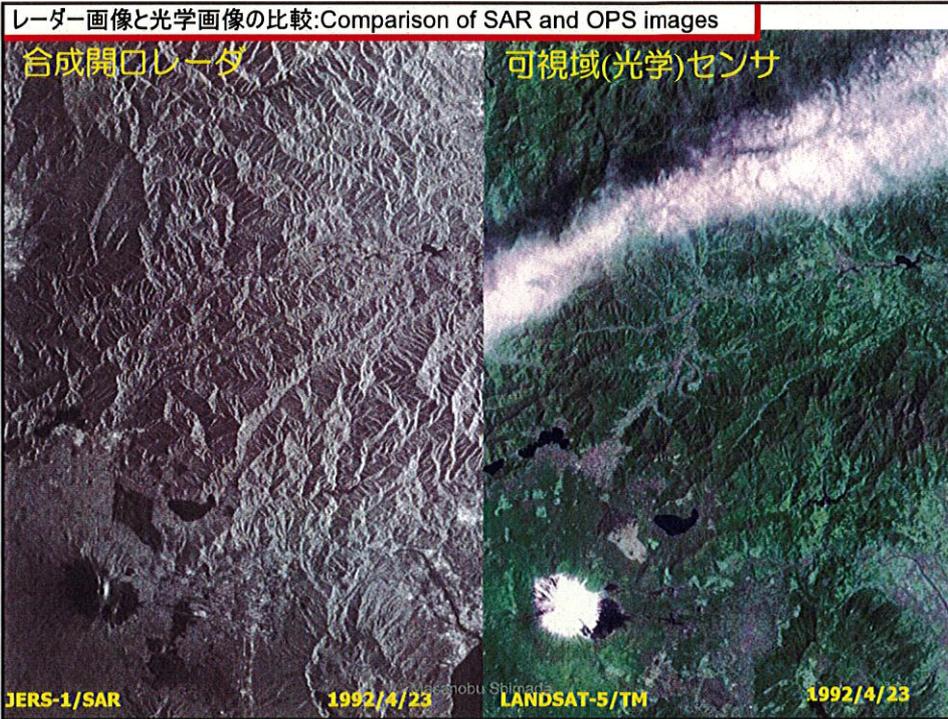

センサーと見え方: Sensor and visibility

- 光学センサー (OPS): 晴天時に地物の認識が良好。近年は非常の高分解能の人工衛星が登場。観測が晴天時日中に限定される。Target identification is well done under the fine weather condition. Recent sensor has finer resolution of under 30cm. The larger obstacle is the weather.
- 合成開口レーダー (Synthetic Aperture Radar: SAR): 全天候性で画像を取得できる。分解能は光学に劣る。All (almost) weather and sensor indispensable of the day/night. Resolution is lower than the optical sensor in general.

Masanobu Shimada

10

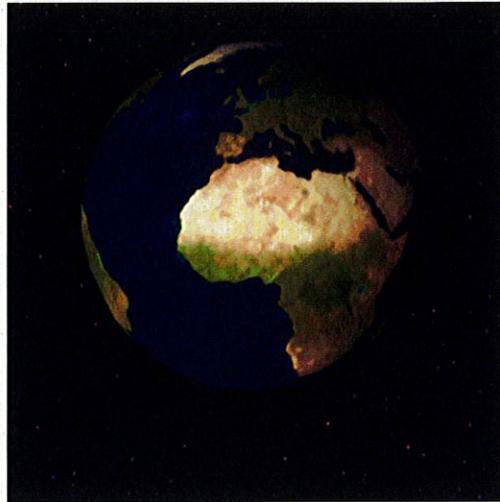

アマゾンモザイク画像(JERS-1 SAR mosaic Amazon)

•3 人工衛星による観測 (How to capture the rotating earth from the space)

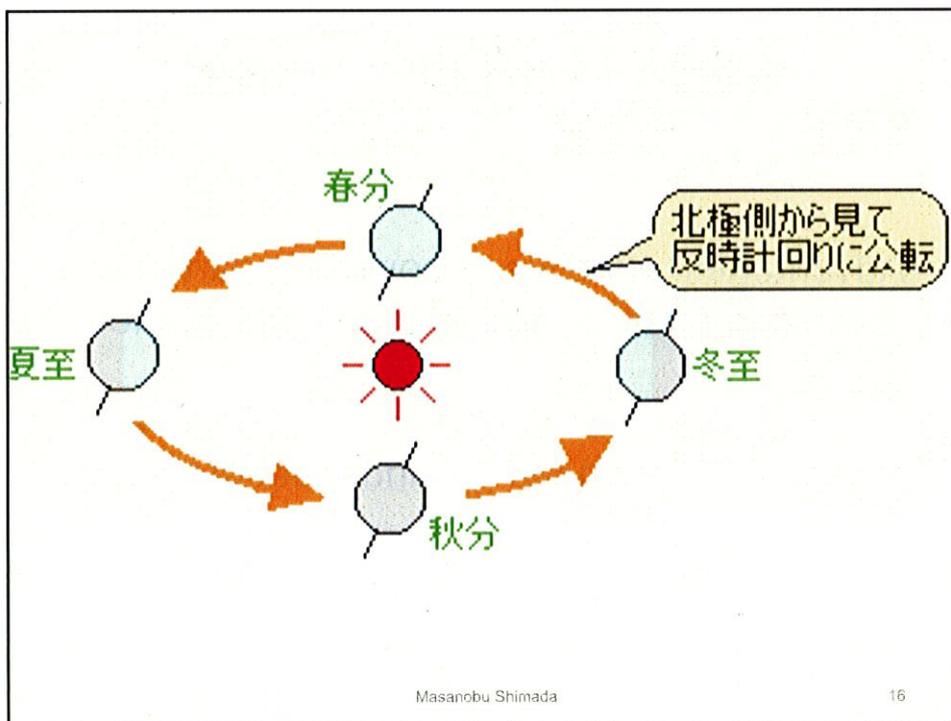

- Advantages: effective to cover the earth surfaces repeatedly within the shorter period.
- Disadvantage: resolution and sensitivity are less accurate than the ground measurements.

Capturing the rotating earth and appropriate expression the map

25

ALOS Satellite System

Launch Date	Jan. 24 2006
Launch Vehicle	H-IIA
Spacecraft Mass	about 4,000kg
Generated Elec. Power	about 7kW at EOL
Orbit	Sun Synchronous
Altitude	691.65km
Repeat Cycle (Sub-Cycle)	46 days (2 days)

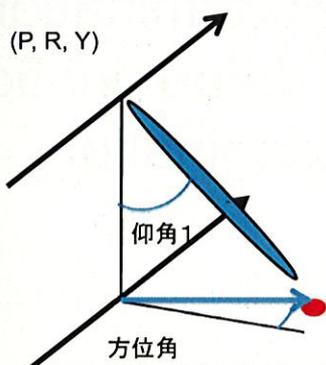

PRISM : Panchromatic Remote-sensing Instrument for Stereo Mapping
 AVNIR-2: Advanced Visible and Near Infrared Radiometer type 2
 PALSAR: Phased Array type L-band Synthetic Aperture Radar

Masanobu Shimada 26

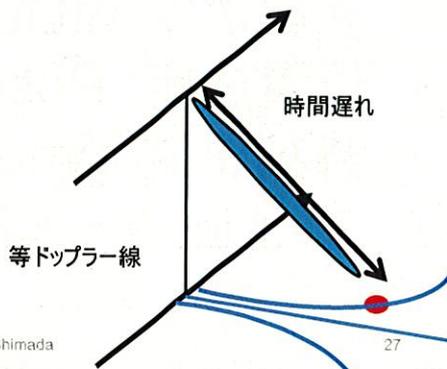

衛星から地上の位置を決定する方法 Determine the ground point from the space

方法	情報1	情報2

SAR	距離(~m)	ドップラー周波数(Hz)	位置決定精度が高い

仰角-方位角法

距離-ドップラー法

Mission Sensors

PRISM Panchromatic Remote-sensing Instruments for Stereo Mapping

- 2.5m Resolution
- Three Telescopes for Elevation Data

AVNIR-2

Advanced Visible and Near Infrared Radiometer type-2

- Multi-band Observation (4 bands)
- Wide range off-nadirs (+-44degrees)
- 10 meter resolution

PALSAR

Phased Array type L-band Synthetic Aperture Radar

- Active Microwave Radar Sensor
- All-Weather Observation
- 9 meter resolution(azimuth)

Precise Position and Attitude determination

Conventional Satellites

Earth Sensor - 0.03 degree · · 370m @ 700km

Star Tracker - 0.003 degree · · 37m @ 700km

ALOS

To meet the requirement of "Mapping without GCPs",

Dual frequency carrier phase tracking type GPS receiver
→ 1m Position Accuracy

High Accuracy Star tracker
→ 2.0×10^{-4} degree · · 2.5m @ 700km

Masanobu Shimada

6. SAR system

JERS-1 SAR

The diagram illustrates the JERS-1 SAR system architecture. It features an Antenna Planer Array on the left. The Receiver section includes a Low Noise Amplifier (LNA), a Gain Amplifier (GAGC), a Staggered Tuning Curve (GStc(t)), and a Receiver Noise Power (Pn,REC). The Transmitter section consists of a Surface Acoustic Wave (SAW) filter, a Pulse generator, and a Transmitter Solid Amp. The Signal Processor (ADC) receives input from the receiver and produces an output (Pout,3). A feedback loop with a gain of 100 dB is shown between the receiver and transmitter sections.

An artistic rendering of the JERS-1 satellite in orbit, showing its large solar panels and the radar beam being directed towards the Earth's surface.

Pi-SAR-L2(2012~)

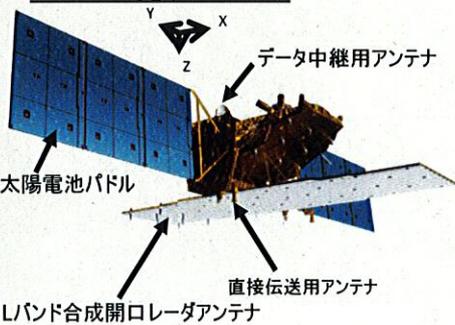

7. Mission of the ALOS-2

- 災害観測, Disaster Observation
- 国土保全, Land Observation
- 環境監視(森林, 極域, 海域等),
Environmental Monitoring
- 資源監視(農業), Resources Observation
- 技術開発, Technology Development

Masanobu Shimada

**陸域観測技術衛星2号
「だいち2号」(ALOS-2)**

2014年5月24日(土) 打上げ成功!

Lバンド合成開口レーダ(PALSAR-2)

- 広い観測可能範囲(2,320km)
- 左右観測機能
- 高分解能(1-3m)
- 昼夜・天候に影響されず観測
- 世界唯一のL-バンドSAR
- Lバンドの強み=高い干渉性
- 緊急時は12時間以内に観測

ALOS-2の主要な利用分野: Main Application

変化抽出
Change detection

(1) 災害(地震・火山・地滑り等による地殻・地形の変化): Disaster Observation

(2) 環境監視(森林+海水): Environmental Observation

(3) 海洋監視(船舶+波浪): Ocean Observation

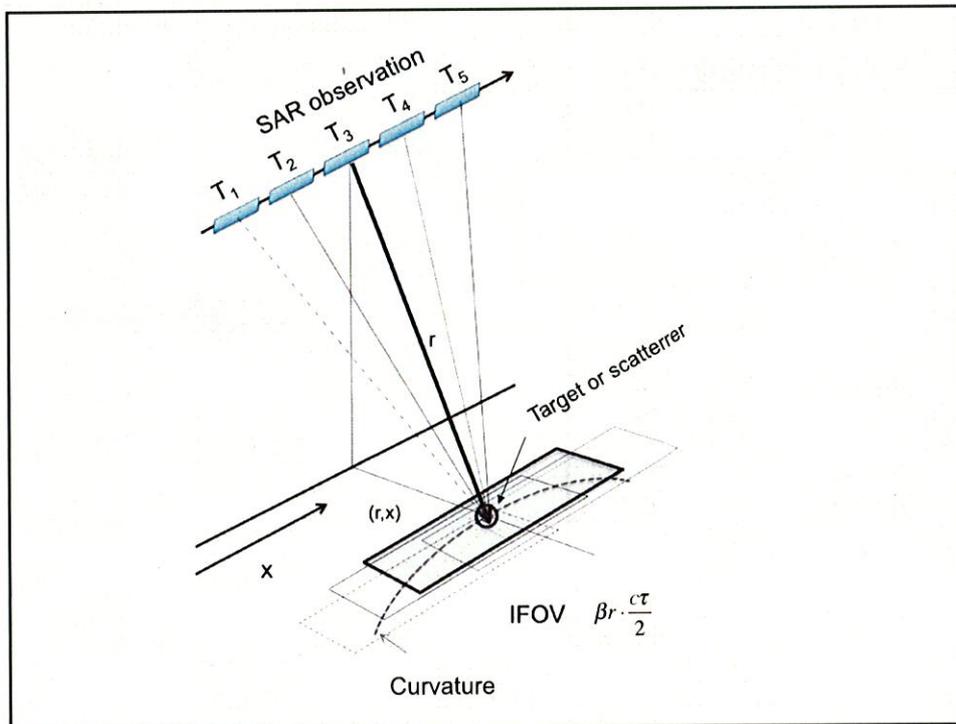

36

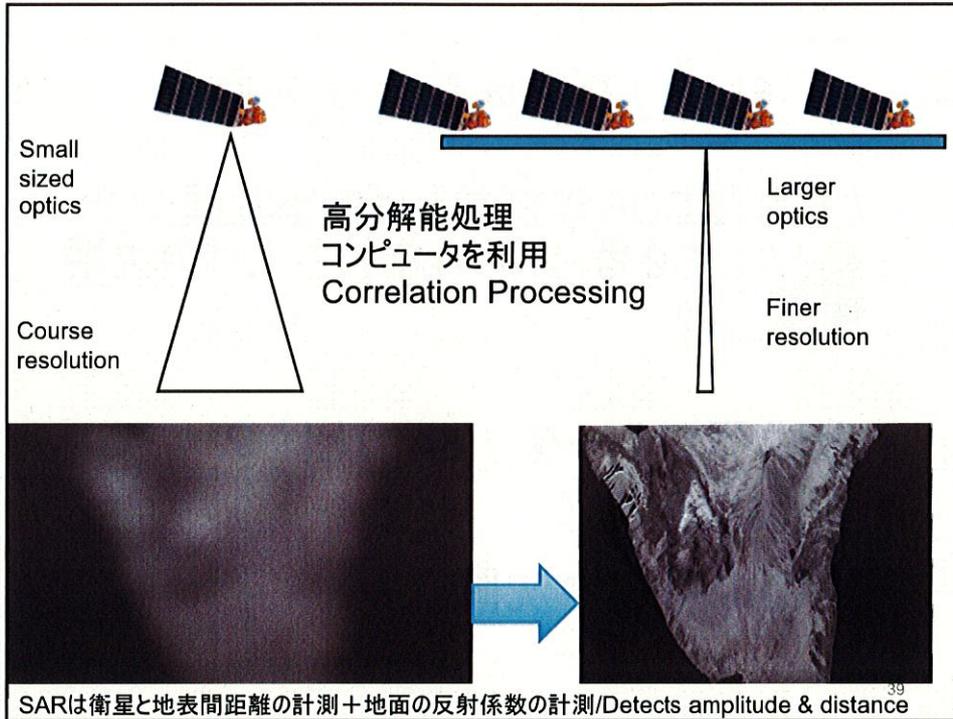

「だいち」で見える地球の変化

- だいち: 2006年打ち上げの陸域観測衛星、だいち2号: 2014年打ち上げの次期衛星
- 合成開口レーダー(SAR)とは？
- 森林の増減
- 地面の隆起や沈降
